METHOD OF AND APPARATUS FOR DYNAMICALLY GENERATING A USER PRESENTATION BASED ON DATABASE STORED RULES

5

ABSTRACT OF THE INVENTION

10   In a computer network such as a telemedicine network, a method of generating a user presentation for an application program includes selecting and retrieving at least one of a plurality of rules stored in one or more databases in response to a request from the application program; executing the rules to retrieve data from the one or more databases; and generating presentation data based on the data, where the presentation data is for use 15 in the user presentation of the application program.
